PHILIPPINES**

The first ferrocement house in the city of Zamboanga, owned by the author and occupied by lessee, I used to call this house as TIMBER LESS structure, because 95% are concrete and the 5% are the forms and mold materials.

The pioneer ferrocement Cistern with a 1200 liters capacity intended for rainwater collector. The design patterns with the publication made by the International Ferrocement Information Center. The cistern is 10 years old already and to date still usable, the same the owner is the author.
