## Write up on Rice Husk Ash - Silpozz

The usual and most widely used pozzolanic materials being Fly Ash, GGBS, and Micro Silica etc. However there still remain certain pozzolanic materials which although are extremely rich in Silica content but not being used on a commercial scale. One such material is Rice Husk Ash - **Silpozz**.

Adding **Silpozz** to the concrete mix even in low replacement will dramatically enhance the workability, strength and impermeability of concrete mixes, while making the concrete durable to chemical attacks, abrasion and reinforcement corrosion, increasing the compressive strength by 10% - 20 % , increasing water resistance by 60%, RCPT by 50% etc .....

More details on the website : <http://www.ricehuskash.com>
